Global Villages Raise Local Forests

Trees and people live together, nurturing each other, so a successful regrowing project engages local people and communities. Spades works with partners to serve and collaborate with all stakeholders. To deliver mutual benefits, every project is structured with partners across interests and capacities:

1. Guidance and support from local communities and landholders can win a forest's future. **Spades verifies that deforestation causes are addressed and that outcomes serve people.**
2. Critical knowledge of indigenous species is held by many groups. **Spades' Ecofit™ biotechnology takes this knowledge farther, adapting it for depleted soils, climate change, etc.**
3. Spades has partnered with the largest regreening contractors worldwide. **Spades' network accounts for most regreening, covering every ecosystem.**
4. Until local agriculture and timber value-chains are sustainable, habitats will struggle. **Spades partnerships support sustainability across rural land uses with the Terrazone™ approach.**
5. Regreening at scale requires donors and investors. **Spades' team has spent decades in blended-capital, impact investing, and large investments, engaging partner efforts.**

*The growing network of
regreening contractors*

It takes an army of geeks to watch over a forest.

These partner services are bundled with Spades' offering in each project. Spades leverages the best technology and know-how available:

1. No single application delivers everything needed for monitoring. **Spades integrates best-of-breed solutions, outperforming others.**
2. The environment is inherently risky. Developing economies can be challenging. Carbon markets are evolving. **Spades makes insurance available for discerning investors.**
3. Someday it may be as easy to trade in carbon as in mutual funds. Not yet. **Spades organizes the team required to give investors an experience as smooth as 'vanilla cream.'**
4. Financial outcomes link to long-term data, global geographies, local conditions, species performance, community support, etc. **Spades' continuous monitoring has third-party oversight.**
5. Structuring projects for large scale investment is a necessary step. **Spades facilitates legal solutions to meet stakeholder requirements.**

Partners

Our regreening partners' expert knowledge and specialized skills include:

Growing techniques: Agroforestry, sustainable agriculture, Assisted Natural Regeneration (ANR), Farmer-Managed Natural Regeneration (FMNR)

Local community needs: Renewable fuel, sustainable timber, fruits, nuts, oils, medicinals

Ecosystems: Arid land solutions, biodiverse forest habitats, blue carbon, sea trees, grasslands

Landscape restoration: Natural landscapes destroyed by deforestation, mine recovery, climate change

Carbon offsets

Regreening Partners and Technology Services
